

## Rapid online integration of store logistics with central SAP® system

### Challenge

- High process cost
- Limited automation
- No online connectivity

### Solution

- MDA®/SOA integration
- Harmonization of metadata
- Secure & reliable transactions

### Benefits

- High transparency SAP interface
- Easy deployment, low footprint
- Effective change management

**“Using the E2E Bridge, the safe online B2B connectivity from our logistics software to SAP was installed and operational within hours. It has worked reliably ever since. E2E makes it really simple and cost effective to integrate 3rd party software with SAP solutions.”**

**Jochen Seidel**  
Head of IT  
Agrano

### Agrano AG

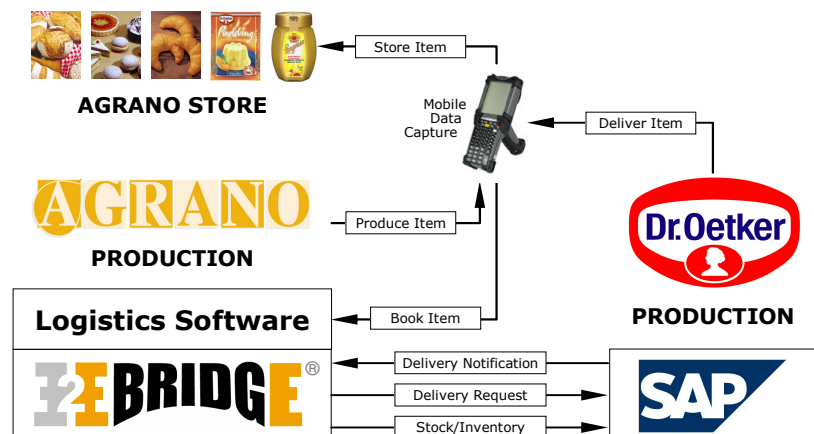

A subsidiary of the German Oetker Group, Agrano is one of the leading brands of Oetker’s food division and stands for additives used by bakeries and households. Agrano’s popular products are exported to 30 countries. Agrano employs 200 people and has headquarters in Basel, Switzerland.

### Challenge

To coordinate the logistics of moving goods between Oetker production and the Agrano store, a batch oriented B2B approach was used to connect Agrano’s logistics software with the SAP system of Oetker. The lack of transparency in the SAP interface resulted in high cost for change requests, and transaction quality was hard to maintain.

### Solution

With its MDA/SOA based approach, the E2E Bridge facilitates a clear separation of concerns between business logic and handling the transaction. This simplifies change management dramatically. The transparent, certified SAP interface ensures robust handling of the 2000-2800 online transactions per day, while enabling model based harmonization of metadata.

### Benefits

- Process automation and optimization across companies
- Transformation from batch oriented to online integration
- Transparent SAP interface with effective change management
- Full transactional safety via standard Internet connection
- Installed in minutes, productive in hours, no programming
