

E2E TECHNOLOGIES

E2E Appoints Award Winning SAP Systems Integrator

Basel, May 3 2006 – E2E Technologies (www.e2e.ch), the leading provider of Model Driven Integration (MDI), today announced that Supply Chain Consulting, a full service provider of enterprise software solutions across the Asia Pacific region, has been appointed as a systems integration partner in Australia.

Supply Chain Consulting is the largest dedicated SAP implementation partner in Australia. Known and recognised in the industry for its on time and on budget delivery of ERP solutions for companies of all sizes, Supply Chain Consulting has a ten year track record in successfully completing over 90 implementations and more than 40 upgrades in projects spanning cross industry and cross functional requirements.

Australian businesses will now have the opportunity to access the world's first Enterprise Services Operating System, the E2E Bridge, which fully automates the design and delivery of business IT services, regardless of their location, format or access route.

The E2E Bridge platform is a breakthrough integration approach which eliminates the need for bespoke development through the complete automation and optimisation of the integration process, while protecting

previous IT investments and providing a smooth path towards SOA modernisation. Specifically, it removes complex programming, code generation and 'round-tripping', which frequently results in a source of inconsistencies between the initial design model and the final executable result.

As a reseller, Supply Chain Consulting will offer the E2E software as a standalone solution with local customisation, support and training services. In addition, the E2E Bridge will be provided as a tool that its training course participants can use to implement the processes learned from its training and development programs.

"E2E fits in perfectly with our strategy to source complimentary solutions for services which we already provide to organisations and fills a gap in our portfolio of tools and services to dramatically reduce the time and cost involved in migrating legacy data and interface developments.

"Most appealing is that E2E automates the manual development activities required to transform complex IT systems into reusable services, reducing a requirement for extensive redevelopment work that typically causes integration project failure," said Duncan Journee, Marketing Director , Supply Chain Consulting.

Supply Chain will target specialist vertical markets where there is a need to simplify and speed up the process of developing interfaces to third party logistics providers, customers and other key partners in the supply chain.

Established in Switzerland in 1998, and having launched their Sydney office late last year, E2E appointed Darren Covington as its first Vice President in the region. E2E's success to date has been drawn from helping organisations reduce the risk of integration and migration projects through removing the need for invasive programming.

E2E's implementations range from large enterprises, such as UBS, who are one of the world's leading financial institutions, down to small and medium businesses, where E2E has proven the value and maturity of its platforms and methodology to radically reduce risk and accelerate project implementation time.

"We are pleased to be partnering with Supply Chain. The appointment is indicative of the strong growth prospects we see in the Australian market for organisations which need to quickly and easily deploy services without extensive redevelopment work leveraging their core business.

"Supply Chain's approach and expertise in offering SAP enterprise application, integration and consulting solutions is a perfect fit for our focused solutions and target markets," said Darren Covington, E2E's Asia Pacific Vice President,

About E2E Technologies Ltd

The global software company, E2E Technologies Ltd, was founded in 1996 and is owned entirely by its founders. E2E Technologies E2E Bridge offers organisations an economically attractive and technically modern approach for platform independent integration of backend systems. The company's headquarters, including its research and development facility, are based in Basle, Switzerland.

About Supply Chain Consulting

Supply Chain Consulting is the premier provider of enterprise software solutions and services across the Asia Pacific region. The company's enviable track record of success and reputation is built on two key foundations: the quality of its people and their absolute commitment to delivering upon their promises. Founded in 1998 and headquartered in Sydney, Supply Chain Consulting supports its clients from offices in Australia and Asia.
